Combo with X-Ring L2 anaged Industrial
Switch
User Manual

This manual contents are based on the below table listing software kernel version, hardware version, and firmware version. If the switch functions have any different from the manual contents description, please contact the local sale dealer for more information.

Firmware Version	V1.13
Kernel Version	V1.40
Hardware Version	

### **FCC Warning**

This Equipment has been tested and found to comply with the limits for a Class-A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### **CE Mark Warning**

This is a Class-A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

# Introduction

The 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch is a cost-effective solution and meets the high reliability requirements demanded by industrial applications. The 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch can be easily managed through the Web GUI. Using fiber port can extend the connection distance that increases the network elasticity and performance. It also provides the X-Ring function that can prevent the network connection failure.

#### **Features**

- System Interface/Performance
  - RJ-45 port support Auto MDI/MDI-X Function
  - SFP (mini-GBIC) supports 100/1000 Dual Mode
  - Store-and-Forward Switching Architecture
  - Back-plane (Switching Fabric): 5.6Gbps
  - 1Mbits Packet Buffer
  - 8K MAC Address Table
- Power Supply
  - Wide-range Redundant Power Design
  - Power Polarity Reverse Protect
  - Overload Current Protection
- VLAN
  - Port Based VLAN
  - Support 802.1 Q Tag VLAN
  - ➢ GVRP
  - Double Tag VLAN (Q in Q)
  - Private VLAN
- Port Trunk with LACP

- QoS (Quality of Service)
  - Support IEEE 802.1p Class of Service,
  - Per port provides 4 priority queues
  - Port Base, Tag Base and Type of Service Priority
- Port Mirror: Monitor traffic in switched networks.
  - > TX Packet only
  - RX Packet only
  - Both of TX and RX Packet
- Security
  - Port Security: MAC address entries/filter
  - IP Security: IP address security management to prevent unauthorized intruder.
  - ➤ Login Security: IEEE802.1X/RADIUS
- IGMP with Query mode for Multi Media Application
- Case/Installation
  - > IP-30 Protection
  - DIN Rail and Wall Mount Design
- Spanning Tree
  - Support IEEE802.1d Spanning Tree
  - Support IEEE802.1w Rapid Spanning Tree
- X-ring
  - X-ring, Dual Homing, and Couple Ring Topology
  - Provide redundant backup feature and the recovery time below 300ms
- Supports IEEE 802.1ab LLDP\*\*
- Bandwidth Control
  - Ingress Packet Filter and Egress Rate Limit
  - Broadcast/Multicast Packet Filter Control
- System Event Log
  - System Log Server/Client
  - ➤ SMTP e-mail Alert
  - Relay Alarm Output System Events
- SNMP Trap
  - Device cold start
  - Power status
  - Authentication failure

- X-ring topology changed
- Port Link up/Link down
- TFTP Firmware Update and System Configuration Restore and Backup

### **Package Contents**

Please refer to the package content list below to verify them against the checklist.

- 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch
- User manual
- RS-232/RJ-45 cable
- Block connector
- 2 wall mount plates and 6 screws
- One DIN-Rail (attached on the switch)

8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo With L2 Managed Industrial Switch

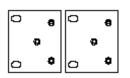

**User Manual** 

RS-232/RJ-45 connector cable

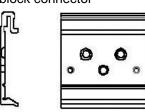

block connector

Wall Mount Plate

Screws

DIN-Rail

Compare the contents of the industrial switch with the standard checklist above. If any item is damaged or missing, please contact the local dealer for service.

# **Hardware Description**

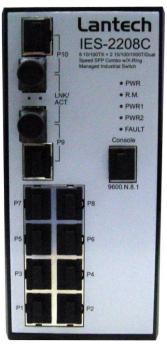

In this paragraph, it will describe the Industrial switch's hardware spec, port, cabling information, and wiring installation.

### **Physical Dimension**

8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch dimension (W x D x H) is **72mm x 105mm x 152mm** 

### **Front Panel**

The Front Panel of the 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch is showed as below:

Front Panel of the industrial switch

### **Top View**

The top panel of the 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch has one terminal block connector of two DC power inputs.

Top Panel of the industrial switch

### **LED Indicators**

The diagnostic LEDs located on the front panel of the industrial switch. They provide real-time information of system and optional status. The following table provides description of the LED status and their meanings for the switch.

LED	Status	Meaning	
PWR	Green	The switch unit is power on	
	Off	The switch unit is no power input	
Green PWR1		Power on	
	Off	No power inputs	
PWR2	Green	Power on	

	Off	No power inputs	
Fault	Red	Power failure or UTP port failure or Fiber port failure	
T duit	Off	No Power failure or UTP port failure or Fiber port failure occurs	
R.M.	Green	The industrial switch is the master of the X-Ring group	
	Off	The industrial switch is not a ring master in the X-Ring group	
LNK/ACT	Green	SFP port is linking	
(for P9, P10	Blinks	Networking is active	
SFP)	Off	No device attached	
	Green (Upper LED)	Network device detected	
	Blinking (Upper LED)	Networking is active	
P9, P10 (RJ-45)	Off (Upper LED)	No device detected	
	Green (Lower LED)	The port is operating at speed of 1000M	
	Off	The port is disconnected or not	
	(lower LED)	operating at speed of 1000M	
D4 D0	Green (Upper LED)	Network device detected	
P1 ~ P8	Blinking (Upper LED)	Networking is active	

Off (Upper LED)	No device attached
Yellow (Lower LED)	The port is operating in full-duplex mode
Blinking (Lower LED)	Collision of Packets occurs
Off (Lower LED)	The port is in half-duplex mode or no device attached

#### **Ports**

#### ■ RJ-45 ports

The 10/100Mbps UTP/STP ports will auto-sense for 10Base-T or 100Base-TX connections. Auto MDI/MDIX means that the switch can connect to another switch or workstation without changing straight through or crossover cabling. See the figures below for straight through and crossover cable schematic.

#### ■ RJ-45 Pin Assignments

Pin Number	Assignment
1	Tx+
2	Tx-
3	Rx+
6	Rx-

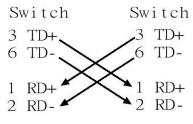

**[NOTE]** '+' and '-' signs represent the polarity of the wires that make up each wire pair.

All ports on this industrial switch support automatic MDI/MDI-X operation, user can use straight-through cables (See figure below) for all network connections to PCs or servers, or to other switches or hubs. In straight-through cable, pins 1, 2, 3, and 6, at one end of the cable, are connected straight through to pins 1, 2, 3 and 6 at the other end of the

cable. The table below shows the 10BASE-T/100BASE-TX MDI and MDI-X port pin outs.

Pin MDI-X	Signal Name	MDI Signal Name	
1	Receive Data plus (RD+)	Transmit Data plus (TD+)	
2	Receive Data minus (RD-)	Transmit Data minus (TD-)	
3	Transmit Data plus (TD+)	Receive Data plus (RD+)	
6	Transmit Data minus (TD-)	Receive Data minus (RD-)	

Straight Through Cable Schematic

Cross Over Cable Schematic

#### ■ 2 Gigabit Copper/SFP (mini-GBIC) combo port:

The Industrial switch has two auto-detect Giga port—UTP/Fiber combo ports. The Gigabit Copper (10/100/1000T) ports should use Category 5e or above UTP/STP cable for connection. The SFP slots are for connecting to the network segment with single or multi-mode fiber. You can choose appropriate mini-GBIC module to plug into the slots. Make sure the module is aligned correctly and then slide the module into the SFP slot until a click is heard. You can use proper multi-mode or single-mode fiber according to the used SFP module. With fiber optic, it transmits speed up to 1000 Mbps and you can prevent noise interference from the system and transmission distance up to 110 km, depending on the mini-GBIC module.

The small form-factor pluggable (SFP) is a compact optical transceiver used in optical communications for both telecommunication and data communications applications.

To connect the transceiver and LC cable, please follow the steps shown below:

First, insert the transceiver into the SFP module. Notice that the triangle mark is the bottom of the module.

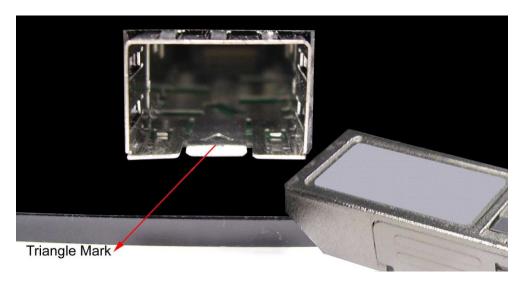

Figure 2.8: Transceiver to the SFP module

Figure 2.9: Transceiver Inserted

Second, insert the fiber cable of LC connector into the transceiver.

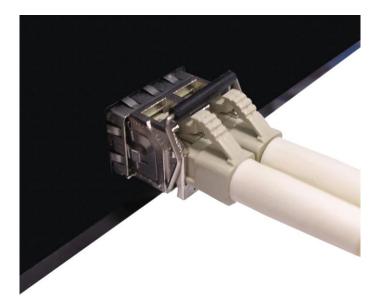

Figure 2.10: LC connector to the transceiver

To remove the LC connector from the transceiver, please follow the steps shown below:

First, press the upper side of the LC connector to release from the transceiver and pull it out.

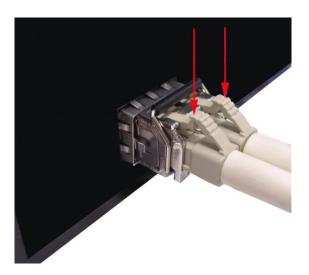

Figure 2.11: Remove LC connector

Second, push down the metal loop and pull the transceiver out by the plastic handle.

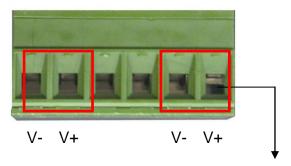

Figure 2.12: Pull out from the transceiver

### **Cabling**

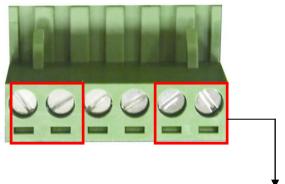

- Using four twisted-pair, Category 5e or above cabling for RJ-45 port connection. The cable between the converter and the link partner (switch, hub, workstation, etc.) must be less than 100 meters (328 ft.) long.
- Fiber segment using **single-mode** connector type must use 9/125 μm single-mode fiber cable. User can connect two devices in the distance up to **30 Kilometers**.
- Fiber segment using **multi-mode** connector type must use 50 or 62.5/125 μm multi-mode fiber cable. User can connect two devices up to **2Km** distances.

# **Wiring the Power Inputs**

Please follow the below steps to insert the power wire.

 Insert the positive and negative wires into the V+ and Vcontacts on the terminal block connector.

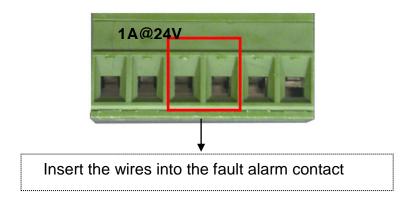

To tighten the wire-clamp screws for preventing the DC wires to loose.

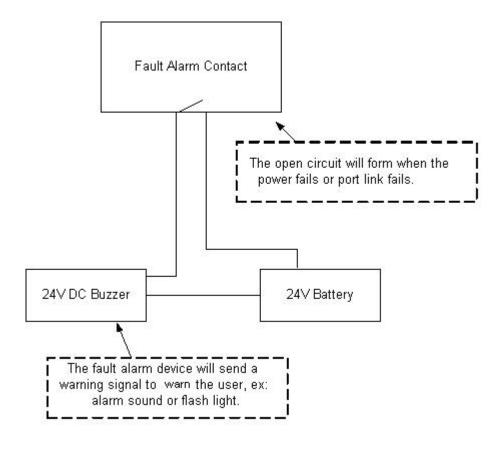

[NOTE] The wire range of terminal block is from 12~ 24 AWG.

### Wiring the Fault Alarm Contact

The fault alarm contact is in the middle of terminal block connector as below picture shows. By inserting the wires, it will detect the fault status which the power is failure or port link failure and form an open circuit. And, application example for the fault alarm contact as below:

[NOTE] The wire range of terminal block is from 12~ 24 AWG.

# **Mounting Installation**

# **DIN-Rail Mounting**

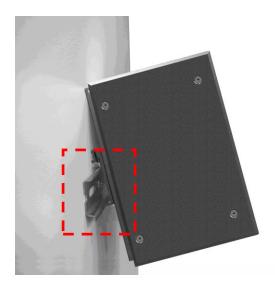

The DIN-Rail is screwed on the industrial switch when out of factory. If the DIN-Rail is not screwed on the industrial switch, please see the following pictures to screw the DIN-Rail on the switch. Follow the below steps to hang the industrial switch.

Rear Panel of the switch

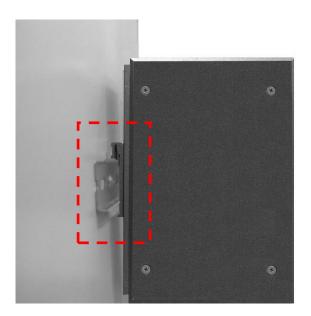

DIN-Rail

- ↓1. Use the screws to screw the DIN-Rail on the industrial switch
- 2. To remove the DIN-Rail, reverse the step 1.

1. First, insert the top of DIN-Rail into the track.

2. Then, lightly push the DIN-Rail into the track.

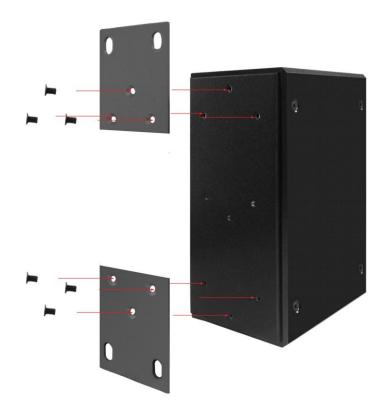

- 3. Check if the DIN-Rail is tightened on the track or not.
- 4. To remove the industrial switch from the track, reverse steps above.

### **Wall Mount Plate Mounting**

Follow the steps below to mount the industrial switch with wall mount plate.

- 1. Remove the DIN-Rail from the industrial switch; loose the screws to remove the DIN-Rail.
- 2. Place the wall mount plate on the rear panel of the industrial switch.
- 3. Use the screws to screw the wall mount plate on the industrial switch.
- 4. Use the hook holes at the corners of the wall mount plate to hang the industrial switch on the wall.
- 5. To remove the wall mount plate, reverse the steps above.

Screwing the wall mount plate on the Industrial media converter

# **Hardware Installation**

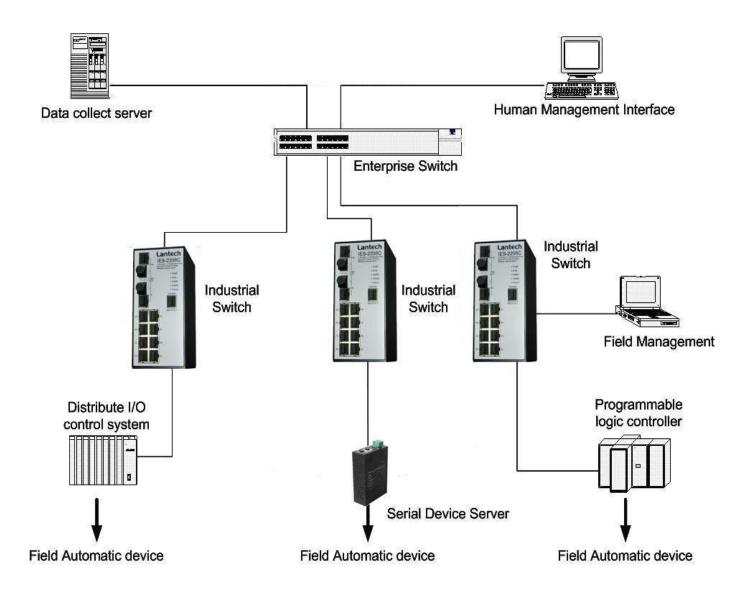

In this paragraph, we will describe how to install the 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch and the installation points to be attended to it.

### **Installation Steps**

- 1. Unpack the Industrial switch
- 2. Check if the DIN-Rail is screwed on the Industrial switch or not. If the DIN-Rail is not screwed on the Industrial switch, please refer to DIN-Rail Mounting section for DIN-Rail installation. If user want to wall mount the Industrial switch, then please refer to Wall Mount Plate Mounting section for wall mount plate installation.
- 3. To hang the Industrial switch on the DIN-Rail track or wall, please refer to the **Mounting Installation** section.
- 4. Power on the Industrial switch. Please refer to the Wiring the Power Inputs section for knowing the information about how to wire the power. The power LED on the Industrial switch will light up. Please refer to the LED Indicators section for indication of LED lights.
- 5. Prepare the twisted-pair, straight through Category 5e/above cable for Ethernet connection.
- 6. Insert one side of RJ-45 cable (category 5e) into the Industrial switch Ethernet port (RJ-45 port) and another side of RJ-45 cable (category 5e) to the network device's Ethernet port (RJ-45 port), e.g. Switch PC or Server. The UTP port (RJ-45) LED on the Industrial switch will light up when the cable is connected with the network device. Please refer to the **LED Indicators** section for LED light indication.
- 7. When all connections are set and LED lights all show in normal, the installation is complete.

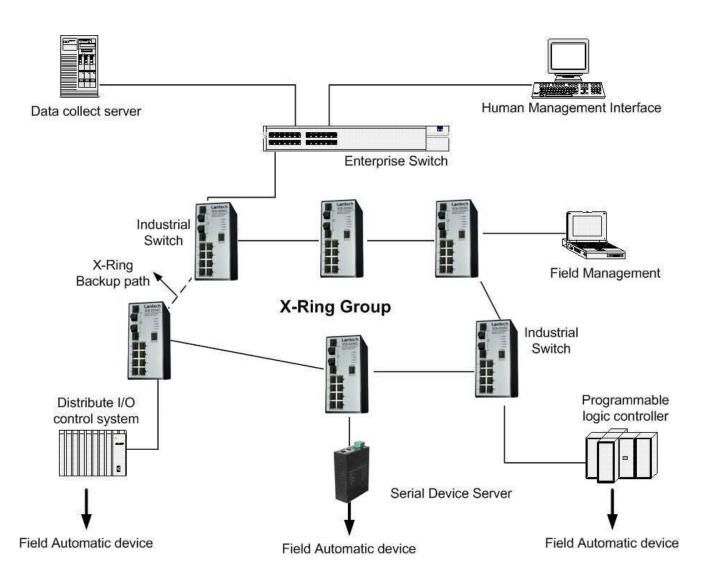

# **Network Application**

This chapter provides some sample applications to help user to have more actual idea of industrial switch function application. A sample application of the industrial switch is as below:

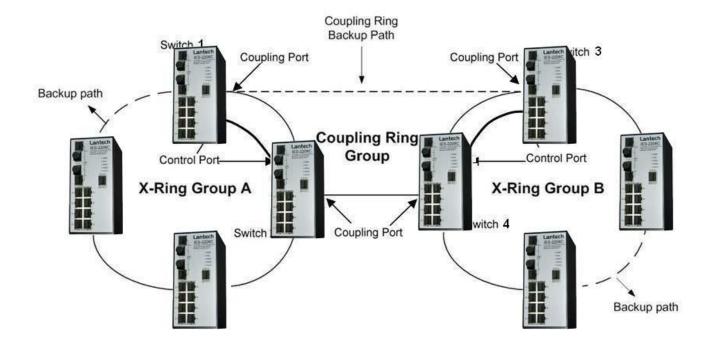

### X-Ring Application

The industrial switch supports the X-Ring protocol that can help the network system to recover from network connection failure within 300ms or less, and make the network system more reliable. The X-Ring algorithm is similar to Spanning Tree Protocol (STP) and Rapid STP (RSTP) algorithm but its recovery time is less than STP/RSTP. The figure below is a sample of X-Ring application.

### **Coupling Ring Application**

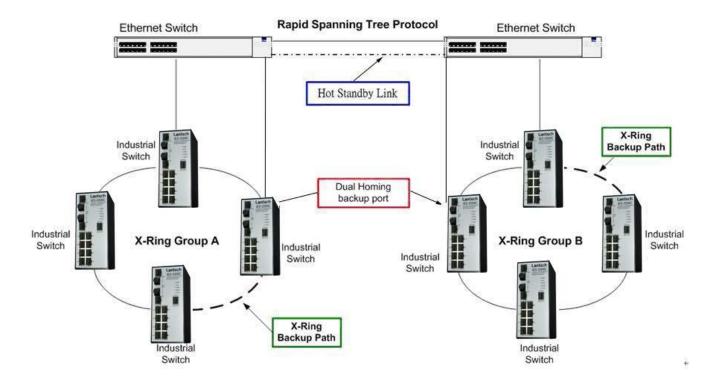

In the network, it may have more than one X-Ring group. Using the coupling ring function can connect each X-Ring for the redundant backup. It can ensure the transmissions between two ring groups not to fail. The following figure is a sample of coupling ring application.

### **Dual Homing Application**

Dual Homing function is to prevent the connection loss from between X-Ring group and upper level/core switch. Assign two ports to be the Dual Homing port that is backup port in the X-Ring group. The Dual Homing function only works when the X-Ring function is active. Each X-Ring group only has one Dual Homing port.

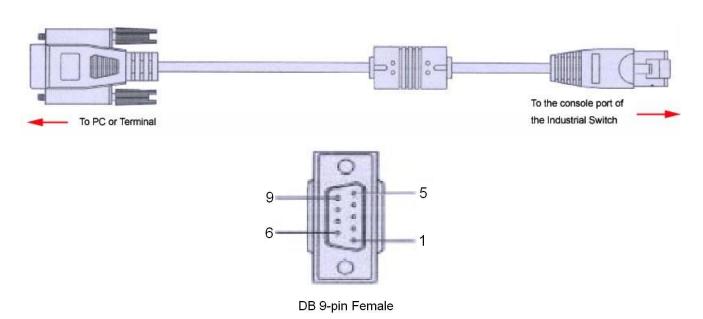

**[NOTE]** In Dual Homing application architecture, the upper level switches need to enable the Rapid Spanning Tree protocol.

# **Console Management**

# **Connecting to the Console Port**

The supplied cable which one end is RS-232 connector and the other end is RJ-45 connector. Attach the end of RS-232 connector to PC or terminal and the other end of RJ-45 connector to the console port of switch. The connected terminal or PC must support the terminal emulation program.

### **Pin Assignment**

DB9 Connector	RJ-	45 Connector
NC	1	Orange/White
2	2	Orange
3	3	Green/White
NC	4	Blue
5	5	Blue/White
NC	6	Green
NC	7	Brown/White
NC	8	Brown

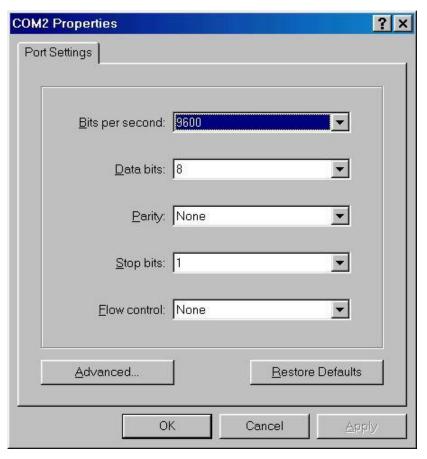

### Login in the Console Interface

When the connection between Switch and PC is ready, turn on the PC and run a terminal emulation program or **Hyper Terminal** and configure its **communication parameters** to match the following default characteristics of the console port:

Baud Rate: 9600 bps

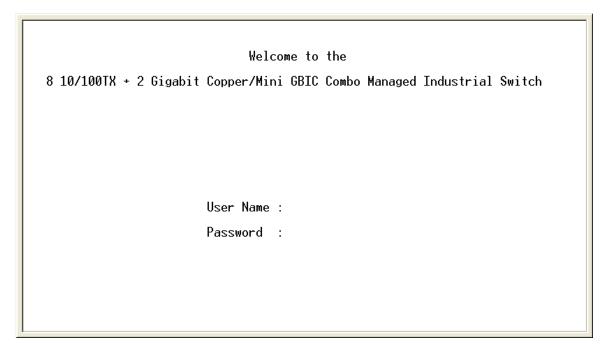

Data Bits: 8
Parity: none
Stop Bit: 1

Flow control: None

The settings of communication parameters

After finishing the parameter settings, click '**OK**'. When the blank screen shows up, press Enter key to bring out the login prompt. Key in the '**root**' (default value) for the both User name and Password (use **Enter** key to switch), then press Enter key and the Main Menu of console management appears. Please see below figure for login screen.

Console login interface

# **CLI Management**

The system supports the console management – CLI command. After you login to the system, you will see a command prompt. To enter CLI management interface, type in 'enable' command.

CLI command interface

The following table lists the CLI commands and description.

# **Commands Level**

Modes	Access Method	Prompt	Exit Method	About This Mode1
User EXEC	Begin a session with your switch.	switch>	Enter logout or quit.	The user commands available at the user level are a subset of those available at the privileged level. Use this mode to • Perform basic tests. • Displays system information.
Privileged EXEC	Enter the enable command while in user EXEC mode.	switch#	Enter disable to exit.	The privileged command is advance mode Privileged this mode to •Displays advance function status • Save configures
Global Configuration	Enter the configure command while in privileged EXEC mode.	switch (config)#	To exit to privileged EXEC mode, enter exit or end	Use this mode to configure parameters that apply to your switch as a whole.
VLAN database	Enter the vlan database command	switch (vlan)#	To exit to user EXEC mode, enter	Use this mode to configure VLAN-specific parameters.

	while in		exit.	
	privileged			
	EXEC mode.			
	Enter the		To exit to

## **Trunk Commands Set**

Netstar Commands	Level	Description	Example
aggregator priority	G	Set port group system	switch(config)#aggregator priority
[1~65535]		priority	22
aggregator activityport	G	Set activity port	switch(config)#aggregator
[Group ID]			activityport 2
[Port Numbers]			
aggregator group	G	Assign a trunk group	switch(config)#aggregator group
[GroupID] [Port-list]		with LACP active.	1 1-4 lacp workp 2
lacp		[GroupID] :1~4	or

workp		[Port-list]:Member port	switch(config)#aggregator group
[Workport]		list, This parameter	2 1,4,3 lacp workp 3
		could be a port	
		range(ex.1-4) or a port	
		list separate by a	
		comma(ex.2, 3, 6)	
		[Workport]: The	
		amount of work ports,	
		this value could not be	
		less than zero or be	
		large than the amount	
		of member ports.	
aggregator group	G	Assign a static trunk	switch(config)#aggregator group
[GroupID] [Port-list]		group.	1 2-4 nolacp
nolacp		[GroupID] :1~4	or
		[Port-list]:Member port	switch(config)#aggregator group
		list, This parameter	1 3,1,2 nolacp
		could be a port	
		range(ex.1-4) or a port	
		list separate by a	
		comma(ex.2, 3, 6)	
show aggregator	Р	Show the information	switch#show aggregator 1
		of trunk group	or
			switch# <b>show aggregator 2</b>
			or
			switch# <b>show aggregator 3</b>
no aggregator lacp	G	Disable the LACP	switch(config)#no aggreator lacp
[GroupID]		function of trunk group	1
no aggregator group	G	Remove a trunk group	switch(config)#no aggreator
[GroupID]			group 2

## **VLAN Commands Set**

Netstar Commands	Level	Description	Example
		•	•

vlan database	Р	Enter VLAN configure	switch#vlan database
		mode	
Vlanmode	V	To set switch VLAN	switch(vlan)#vlanmode portbase
[portbase  802.1q		mode.	or
gvrp]			switch(vlan)# <b>vlanmode 802.1q</b>
			or
			switch(vlan)# <b>vlanmode gvrp</b>
no vlan	V	No VLAN	Switch(vlan)#no vlan
Ported based VLAN confi	gurati	on	
vlan port-based	V	Add new port based	switch(vlan)#vlan port-based
grpname		VALN	grpname test grpid 2 port 2-4
[Group Name]			or
grpid			switch(vlan)# <b>vlan port-based</b>
[GroupID]			grpname test grpid 2 port 2,3,4
port			
[PortNumbers]			
show vlan [GroupID]	V	Show VLAN	switch(vlan)# <b>show vlan 23</b>
or show vlan		information	
no vlan group	V	Delete port base	switch(vlan)# <b>no vlan group 2</b>
[GroupID]		group ID	
,		IEEE 802.1Q VLAN	
vlan 8021q name	V	Change the name of	switch(vlan)#vlan 8021q name
[GroupName] vid		VLAN group, if the	test vid 22
[VID]		group didn't exist, this	
		command can't be	
		applied.	
vlan 8021q port	V	Assign a access link	switch(vlan)#vlan 8021q port 3
[PortNumber] access-link untag		for VLAN by port, if the	access-link untag 33
[UntaggedVID]		port belong to a trunk	
		group, this command	
		can't be applied.	
vlan 8021q port	V	Assign a trunk link for	switch(vlan)#vlan 8021q port 3
[PortNumber] trunk-link tag		VLAN by port, if the	trunk-link tag 2,3,6,99

[Toward   /   D       a   ]			
[TaggedVID List]		ľ	or
		group, this command	switch(vlan)# <b>vlan 8021q port 3</b>
		can't be applied.	trunk-link tag 3-20
vlan 8021q port	V	Assign a hybrid link for	switch(vlan)# <b>vlan 8021q port 3</b>
[PortNumber] hybrid-link untag		VLAN by port, if the	hybrid-link untag 4 tag 3,6,8
[UntaggedVID]		port belong to a trunk	or
tag [TaggedVID List]		group, this command	switch(vlan)#vlan 8021q port 3
[TaggedVID LISt]		can't be applied.	hybrid-link untag 5 tag 6-8
vlan 8021q trunk	V	Assign a access link	switch(vlan)#vlan 8021q trunk 3
[PortNumber] access-link untag		for VLAN by trunk	access-link untag 33
[UntaggedVID]		group	
vlan 8021q trunk	V	Assign a trunk link for	switch(vlan)#vlan 8021q trunk 3
[PortNumber] trunk-link tag		VLAN by trunk group	trunk-link tag 2,3,6,99
[TaggedVID List]			or
[ Tagged vib List]			switch(vlan)#vlan 8021q trunk 3
			trunk-link tag 3-20
vlan 8021q trunk	٧	Assign a hybrid link for	switch(vlan)#vlan 8021q trunk 3
[PortNumber] hybrid-link untag		VLAN by trunk group	hybrid-link untag 4 tag 3,6,8
[UntaggedVID]			or
tag [TaggedVID List]			switch(vlan)#vlan 8021q trunk 3
Liaggertip Fist]			hybrid-link untag 5 tag 6-8
show vlan [GroupID]	٧	Show VLAN	switch(vlan)#show vlan 23
or show vlan		information	
no vlan group	٧	Delete port base	switch(vlan)# <b>no vlan group 2</b>
[GroupID]		group ID	

# **Spanning Tree Commands Set**

Netstar Commands	Level	Description	Example
spanning-tree enable	G	Enable spanning tree	switch(config)#spanning-tree
			enable
spanning-tree priority	G	Configure spanning	switch(config)#spanning-tree
[0~61440]		tree priority parameter	priority 32767
spanning-tree max-age	G	Use the spanning-tree	switch(config)#spanning-tree

[seconds]		max-age global	max-age 15
		configuration	
		command to change	
		the interval between	
		messages the	
		spanning tree receives	
		from the root switch. If	
		a switch does not	
		receive a bridge	
		protocol data unit	
		(BPDU) message from	
		the root switch within	
		this interval, it	
		recomputed the	
		Spanning Tree	
		Protocol (STP)	
		topology.	
spanning-tree hello-	G	Use the spanning-tree	switch(config)# <b>spanning-tree</b>
time [seconds]		hello-time global	hello-time 3
		configuration	
		command to specify	
		the interval between	
		hello bridge protocol	
		data units (BPDUs).	
spanning-tree forward-	G	Use the spanning-tree	switch(config)# <b>spanning-tree</b>
time [seconds]		forward-time global	forward-time 20
		configuration	
		command to set the	
		forwarding-time for the	
		specified spanning-	
		tree instances. The	
		forwarding time	
		determines how long	

		each of the listening	
		and	
		learning states last before the port begins forwarding.	
stp-path-cost	I	Use the spanning-tree	switch(config)#interface
[1~20000000]		cost interface	fastEthernet 2
		configuration	switch(config-if)#stp-path-cost 20
		command to set the	
		path cost for Spanning	
		Tree	
		Protocol (STP)	
		calculations. In the	
		event of a loop,	
		spanning tree	
		considers the path	
		cost when selecting	
		an interface to place	
		into the forwarding	
		state.	
stp-path-priority	ı	Use the spanning-tree	switch(config)#interface
[Port Priority]		port-priority interface	fastEthernet 2
		configuration	switch(config-if)#stp-path-priority
		command to configure	128
		a port priority that	
		is used when two	
		switches tie for	
		position as the root	
		switch.	
stp-admin-p2p	ı	Admin P2P of STP	switch(config)#interface
[Auto True False]		priority on this	fastEthernet 2
		interface.	switch(config-if)#stp-admin-p2p
			Auto
stp-admin-edge	I	Admin Edge of STP	switch(config)#interface

[True False]		priority on this	fastEthernet 2
		interface.	switch(config-if)#stp-admin-edge
			True
stp-admin-non-stp	I	Admin NonSTP of	switch(config)#interface
[True False]		STP priority on this	fastEthernet 2
		interface.	switch(config-if)#stp-admin-non-
			stp False
show spanning-tree	Е	Displays a summary of	switch>show spanning-tree
		the spanning-tree	
		states.	
no spanning-tree	G	Disable spanning-tree.	switch(config)#no spanning-tree

## **QOS Commands Set**

Netstar Commands	Level	Description	Example
qos policy	G	Select QOS policy	switch(config)#qos policy
[weighted-fair strict]		scheduling	weighted-fair
qos prioritytype	G	Setting of QOS priority	switch(config)#qos prioritytype
[port-based cos-		type	
only tos-only cos-			
first tos-first]			
qos priority portbased	G	Configure Port-based	switch(config)#qos priority
[Port] [lowest low middle high]		Priority	portbased 1 low
qos priority cos	G	Configure COS	switch(config)#qos priority cos 0
[Priority][lowest low mid dle high]		Priority	middle
qos priority tos	G	Configure TOS Priority	switch(config)#qos priority tos 3
[Priority][lowest low mid			high
dle high]			
show qos	Р	Displays the	Switch#show qos
		information of QoS	
		configuration	
no qos	G	Disable QoS function	switch(config)#no qos

## **IGMP Commands Set**

Netstar Commands	Level	Description	Example
igmp enable	G	Enable IGMP	switch(config)#igmp enable
		snooping function	
Igmp-query auto	G	Set IGMP query to	switch(config)#Igmp-query auto
		auto mode	
Igmp-query force	G	Set IGMP query to	switch(config)#Igmp-query force
		force mode	
show igmp	Р	Displays the details of	switch#show igmp configuration
configuration		an IGMP	
		configuration.	
show igmp multi	Р	Displays the details of	switch#show igmp multi
		an IGMP snooping	
		entries.	
no igmp	G	Disable IGMP	switch(config)#no igmp
		snooping function	
no igmp-query	G	Disable IGMP query	switch#no igmp-query

## **Mac / Filter Table Commands Set**

Netstar Commands	Level	Description	Example
mac-address-table static	I	Configure MAC	switch(config)#interface
hwaddr		address table of	fastEthernet 2
[MAC]		interface (static).	switch(config-if)#mac-address-
			table static hwaddr
			000012345678
mac-address-table filter	G	Configure MAC	switch(config)#mac-address-table
hwaddr		address table(filter)	filter hwaddr 000012348678
[MAC]			
show mac-address-table	Р	Show all MAC address	switch#show mac-address-table
		table	
show mac-address-table	Р	Show static MAC	switch#show mac-address-table
static		address table	static

show mac-address-table	Р	Show filter MAC	switch#show mac-address-table
filter		address table.	filter
no mac-address-table	ı	Remove an entry of	switch(config)#interface
static hwaddr		MAC address table of	fastEthernet 2
[MAC]		interface (static)	switch(config-if)#no mac-address-
			table static hwaddr
			000012345678
no mac-address-table	G	Remove an entry of	switch(config)#no mac-address-
filter hwaddr		MAC address table	table filter hwaddr 000012348678
[MAC]		(filter)	
no mac-address-table	G	Remove dynamic	switch(config)#no mac-address-
		entry of MAC address	table
		table	

## **SNMP Commands Set**

Netstar Commands	Level	Description	Example
snmp system-name	G	Set SNMP agent	switch(config)#snmp system-
[System Name]		system name	name I2switch
snmp system-location	G	Set SNMP agent	switch(config)#snmp system-
[System Location]		system location	location lab
snmp system-contact	G	Set SNMP agent	switch(config)#snmp system-
[System Contact]		system contact	contact where
snmp agent-mode	G	Select the agent mode	switch(config)#snmp agent-mode
[v1v2c v3 v1v2cv3]		of SNMP	v1v2cv3
snmp community-	G	Add SNMP community	switch(config)#snmp community-
strings [Community]		string.	strings public right rw
right			
[RO/RW]			
snmp-server host	G	Configure SNMP	switch(config)#snmp-server host
[IP address]		server host	192.168.1.50 community public
community		information and	trap-version v1
[Community-string]		community string	(remove)
trap-version			Switch(config)#

[v1 v2c]			no snmp-server host
			192.168.1.50
snmpv3 context-name	G	Configure the context	switch(config)#snmpv3 context-
[Context Name ]		name	name Test
snmpv3 user	G	Configure the	switch(config)#snmpv3 user
[User Name]		userprofile for	test01 group G1 password
group		SNMPV3 agent.	AuthPW PrivPW
[Group Name]		Privacy password	
password		could be empty.	
[Authentication			
Password] [Privacy			
Password]			
snmpv3 access context-	G	Configure the access	switch(config)#snmpv3 access
name [Context Name ]		table of SNMPV3	context-name Test group G1
group		agent	security-level AuthPriv
[Group Name ]			match-rule Exact views V1 V1 V1
security-level			
[NoAuthNoPriv AuthNoP			
riv AuthPriv]			
match-rule			
[Exact Prifix]			
views			
[Read View Name]			
[Write View Name]			
[Notify View Name]			
snmpv3 mibview view	G	Configure the mibview	switch(config)#snmpv3 mibview
[View Name]		table of SNMPV3	view V1 type Excluded sub-oid
type		agent	1.3.6.1
[Excluded Included]			
sub-oid			
[OID]			
show snmp	Р	Show SNMP	switch#show snmp
		configuration	

no snmp community-	G	Remove the specified	switch(config)#no snmp
strings [Community]		community.	community-strings public
no snmp-server host	G	Remove the SNMP	switch(config)#no snmp-server
[Host-address]		server host.	192.168.1.50
no snmpv3 user	G	Remove specified	switch(config)#no snmpv3 user
[User Name]		user of SNMPv3	Test
		agent.	
no snmpv3 access	G	Remove specified	switch(config)#no snmpv3 access

# **Port Mirroring Commands Set**

Netstar Commands	Level	Description	Example
monitor rx	G	Set RX destination	switch(config)#monitor rx
		port of monitor	

		function	
monitor tx	G	Set TX destination	switch(config)#monitor tx
		port of monitor	
		function	
show monitor	Р	Show port monitor	switch#show monitor
		information	
monitor	I	Configure source port	switch(config)#interface
[RX TX Both]		of monitor function	fastEthernet 2
			switch(config-if)#monitor RX
show monitor	I	Show port monitor	switch(config)#interface
		information	fastEthernet 2
			switch(config-if)#show monitor
no monitor	I	Disable source port of	switch(config)#interface
		monitor function	fastEthernet 2
			switch(config-if)#no monitor

## 802.1x Commands Set

Netstar Commands	Level	Description	Example
8021x enable	G	Use the 802.1x global	switch(config)# 8021x enable
		configuration	
		command to enable	
		802.1x protocols.	
8021x system radiusip	G	Use the 802.1x	switch(config)# 8021x system
[IP address]		system radius IP	radiusip 192.168.1.1
		global configuration	
		command to change	
		the radius server IP.	
8021x system serverport	G	Use the 802.1x	switch(config)# 8021x system
[port ID]		system server port	serverport 1815
		global configuration	
		command to change	
		the radius server port	
8021x system	G	Use the 802.1x	switch(config)# 8021x system

accountport		system account port	accountport 1816
[port ID]		global configuration	
		command to change	
		the accounting port	
8021x system sharekey	G	Use the 802.1x	switch(config)# 8021x system
[ID]		system share key	sharekey 123456
		global configuration	
		command to change	
		the shared key value.	
8021x system nasid	G	Use the 802.1x	switch(config)# 8021x system
[words]		system nasid global	nasid test1
		configuration	
		command to change	
		the NAS ID	
8021x misc quietperiod	G	Use the 802.1x misc	switch(config)# 8021x misc
[sec.]		quiet period global	quietperiod 10
		configuration	
		command to specify	
		the quiet period value	
		of the switch.	
8021x misc txperiod	G	Use the 802.1x misc	switch(config)# 8021x misc
[sec.]		TX period global	txperiod 5
		configuration	
		command to set the	
		TX period.	
8021x misc	G	Use the 802.1x misc	switch(config)# 8021x misc
supportimeout [sec.]		supp timeout global	supportimeout 20
		configuration	
		command to set the	
		supplicant timeout.	
8021x misc	G	Use the 802.1x misc	switch(config)#8021x misc
servertimeout [sec.]		server timeout global	servertimeout 20
		configuration	

		command to set the	
		server timeout.	
8021x misc maxrequest	G	Use the 802.1x misc	switch(config)# 8021x misc
[number]		max request global	maxrequest 3
		configuration	
		command to set the	
		MAX requests.	
8021x misc	G	Use the 802.1x misc	switch(config)# 8021x misc
reauthperiod [sec.]		reauth period global	reauthperiod 3000
		configuration	
		command to set the	
		reauth period.	
8021x portstate	I	Use the 802.1x port	switch(config)#interface
[disable   reject   accept		state interface	fastethernet 3
authorize]		configuration	switch(config-if)#8021x portstate
		command to set the	accept
		state of the selected	
		port.	
show 8021x	Е	Displays a summary of	switch>show 8021x
		the 802.1x properties	
		and also the port	
		sates.	
no 8021x	G	Disable 802.1x	switch(config)#no 8021x
		function	

## **TFTP Commands Set**

Netstar Commands	Level	Description	Defaults Example
backup	G	Save configuration to	switch(config)#backup
flash:backup_cfg		TFTP and need to	flash:backup_cfg
		specify the IP of TFTP	
		server and the file name	
		of image.	

restore	G	Get configuration from	switch(config)# <b>restore</b>
flash:restore_cfg		TFTP server and need to	flash:restore_cfg
		specify the IP of TFTP	
		server and the file name	
		of image.	
upgrade	G	Upgrade firmware by	switch(config)#upgrade
flash:upgrade_fw		TFTP and need to	lash:upgrade_fw
		specify the IP of TFTP	
		server and the file name	
		of image.	

# SystemLog, SMTP and Event Commands Set

Netstar Commands	Level	Description	Example
systemlog ip	G	Set System log server	switch(config)# systemlog ip
[IP address]		IP address.	192.168.1.100
systemlog mode	G	Specified the log	switch(config)# systemlog mode
[client server both]		mode	both
show systemlog	Е	Displays system log.	Switch>show systemlog
show systemlog	Р	Show system log	switch#show systemlog
		client & server	
		information	
no systemlog	G	Disable systemlog	switch(config)#no systemlog
		functon	
smtp enable	G	Enable SMTP function	switch(config)#smtp enable
smtp serverip	G	Configure SMTP	switch(config)#smtp serverip
[IP address]		server IP	192.168.1.5
smtp authentication	G	Enable SMTP	switch(config)#smtp
		authentication	authentication
smtp account	G	Configure	switch(config)#smtp account
[account]		authentication account	User
smtp password	G	Configure	switch(config)#smtp password
[password]		authentication	
		password	

smtp rcptemail	G	Configure Rcpt e-mail	switch(config)#smtp rcptemail 1
[Index] [Email address]		Address	Alert@test.com
show smtp	Р	Show the information	switch#show smtp
		of SMTP	
no smtp	G	Disable SMTP	switch(config)#no smtp
		function	
event device-cold-start	G	Set cold start event	switch(config)#event device-cold-
[Systemlog SMTP Both]		type	start both
event authentication-	G	Set Authentication	switch(config)#event
failure		failure event type	authentication-failure both
[Systemlog SMTP Both]			
event X-ring-topology-	G	Set X-ring topology	switch(config)#event X-ring-
change		changed event type	topology-change both
[Systemlog SMTP Both]			
event systemlog	I	Set port event for	switch(config)#interface
[Link-UP Link-		system log	fastethernet 3
Down Both]			switch(config-if)#event systemlog
			both
event smtp	I	Set port event for	switch(config)#interface
[Link-UP Link-		SMTP	fastethernet 3
Down Both]			switch(config-if)#event smtp both
show event	Р	Show event selection	switch#show event
no event device-cold-	G	Disable cold start	switch(config)#no event device-
start		event type	cold-start
no event authentication-	G	Disable Authentication	switch(config)#no event
failure		failure event typ	authentication-failure
no event X-ring-	G	Disable X-ring	switch(config)#no event X-ring-
topology-change		topology changed	topology-change
		event type	
no event systemlog	ı	Disable port event for	switch(config)#interface
		system log	fastethernet 3
			switch(config-if)#no event
			systemlog

no event smpt	I	Disable port event for	switch(config)#interface
		SMTP	fastethernet 3
			switch(config-if)#no event smtp
show systemlog	Р	Show system log	switch#show systemlog
		client & server	
		information	

## **SNTP Commands Set**

Netstar Commands	Level	Description	Example
sntp enable	G	Enable SNTP function	switch(config)#sntp enable
sntp daylight	G	Enable daylight saving	switch(config)#sntp daylight
		time, if SNTP function	
		is inactive, this	
		command can't be	
		applied.	
sntp daylight-period	G	Set period of daylight	switch(config)# sntp daylight-
[Start time] [End time]		saving time, if SNTP	period 20060101-01:01
		function is inactive,	20060202-01-01
		this command can't be	
		applied.	
		Parameter format:	
		[yyyymmdd-hh:mm]	
sntp daylight-offset	G	Set offset of daylight	switch(config)#sntp daylight-
[Minute]		saving time, if SNTP	offset 3
		function is inactive,	
		this command can't be	
		applied.	
sntp ip	G	Set SNTP server IP, if	switch(config)#sntp ip 192.169.1.1
[IP]		SNTP function is	
		inactive, this	
		command can't be	
		applied.	
sntp timezone	G	Set timezone index,	switch(config)#sntp timezone 22

[Timezone]		use 'show sntp	
		timzezone' command	
		to get more	
		information of index	
		number	
show sntp	Р	Show SNTP	switch#show sntp
		information	
show sntp timezone	Р	Show index number of	switch#show sntp timezone
		time zone list	
no sntp	G	Disable SNTP function	switch(config)# <b>no sntp</b>
no sntp daylight	G	Disable daylight	switch(config)#no sntp daylight
		saving time	

## X-ring Commands Set

Netstar Commands	Level	Description	Example
Xring enable	G	Enable X-ring	switch(config)#Xring enable
Xring master	G	Enable ring master	switch(config)#Xring master
Xring couplering	G	Enable couple ring	switch(config)#Xring couplering
Xring dualhoming	G	Enable dual homing	switch(config)#Xring dualhoming
Xring ringport	G	Configure 1st/2nd	switch(config)#Xring ringport 7 8
[1st Ring Port] [2nd		Ring Port	
Ring Port]			
Xring couplingport	G	Configure Coupling	switch(config)#Xring couplingport
[Coupling Port]		Port	1
Xring controlport	G	Configure Control Port	switch(config)#Xring controlport
[Control Port]			2
Xring homingport	G	Configure Dual	switch(config)#Xring homingport
[Dual Homing Port]		Homing Port	3
show Xring	Р	Show the information	switch#show Xring
		of X - Ring	
no Xring	G	Disable X-ring	switch(config)#no X ring
no Xring master	G	Disable ring master	switch(config)# no Xring master
no Xring couplering	G	Disable couple ring	switch(config)# no Xring

			couplering
no Xring dualhoming	G	Disable dual homing	switch(config)# no Xring
			dualhoming

**Web-Based Management** 

This section introduces the configuration and functions of the Web-Based management.

**About Web-based Management** 

On CPU board of the switch there is an embedded HTML web site residing in flash

memory, which offers advanced management features and allow users to manage the

switch from anywhere on the network through a standard browser such as Microsoft

Internet Explorer.

The Web-Based Management supports Internet Explorer 6.0 or later version. And, it is

applied for Java Applets for reducing network bandwidth consumption, enhance access

speed and present an easy viewing screen.

**Preparing for Web Management** 

Before using the web management, install the industrial switch on the network and make

sure that any one of the PCs on the network can connect with the industrial switch

through the web browser. The industrial switch default value of IP, subnet mask,

username and password is as below:

IP Address: 192.168.16.1

Subnet Mask: 255.255.255.0

Default Gateway: 192.168.16.254

User Name: root

Password: root

51

## **System Login**

- 1. Launch the Internet Explorer on the PC
- 2. Key in 'http:// '+' the IP address of the switch', and then Press 'Enter'.

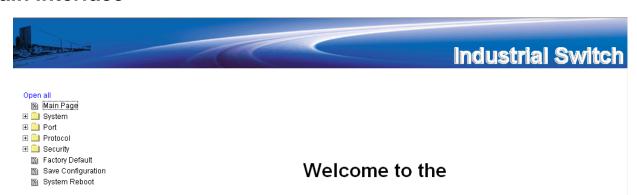

- 3. The login screen will appear right after
- 4. Key in the user name and password. The default user name and password are the same as 'root'
- 5. Press 'Enter' or 'OK', and then the home screen of the Web-based management appears as below:

Login screen

## Main interface

## 8 10/100TX + 2 Gigabit Copper/Mini GBIC Combo Managed Industrial Switch

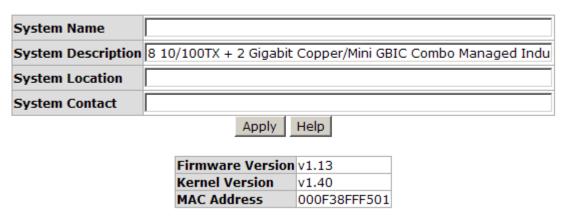

Main interface

#### **System Information**

Assigning the system name, location and view the system information

- **System Name:** Assign the name of switch. The maximum length is 64 bytes
- System Description: Displays the description of switch. Read only cannot be modified
- **System Location:** Assign the switch physical location. The maximum length is 64 bytes
- **System Contact:** Enter the name of contact person or organization
- **Firmware Version**: Displays the switch's firmware version
- **Kernel Version**: Displays the kernel software version
- MAC Address: Displays the unique hardware address assigned by manufacturer (default)

# System Information

System information interface

## **IP Configuration**

User can configure the IP Settings and DHCP client function

■ DHCP Client: To enable or disable the DHCP client function. When DHCP client function is enabling, the industrial switch will be assigned the IP address from the network DHCP server. The default IP address will be replace by the DHCP server assigned IP address. After user click 'Apply' button, a popup dialog show up. It is to inform the user that when the DHCP client is enabling, the current IP will lose and

user should find the new IP on the DHCP server.

- IP Address: Assign the IP address that the network is using. If DHCP client function is enabling, and then user don't need to assign the IP address. And, the network DHCP server will assign the IP address for the industrial switch and displays in this column. The default IP is 192.168.16.1.
- **Subnet Mask:** Assign the subnet mask of the IP address. If DHCP client function is enabling, and then user do not need to assign the subnet mask.
- **Gateway:** Assign the network gateway for the industrial switch. The default gateway is 192.168.16.254.
- **DNS1:** Assign the primary DNS IP address.
- **DNS2:** Assign the secondary DNS IP address.
- And then, click Apply

# **IP Configuration**

IP configuration interface

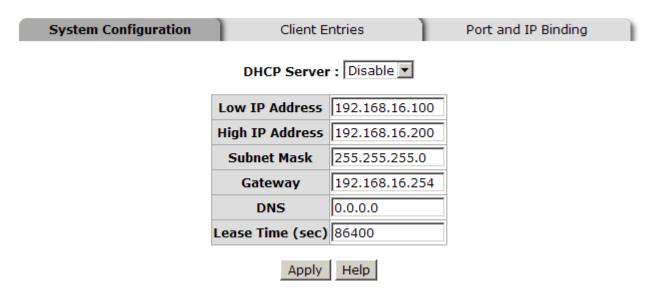

## **DHCP Server – System configuration**

The system provides the DHCP server function. Enable the DHCP server function, the switch system will be a DHCP server.

- **DHCP Server:** Enable or Disable the DHCP Server function. Enable the switch will be the DHCP server on your local network.
- Low IP Address: the dynamic IP assign range. Low IP address is the beginning of the dynamic IP assigns range. For example: dynamic IP assign range is from

- 192.168.1.100 ~ 192.168.1.200. 192.168.1.100 will be the Low IP address.
- **High IP Address:** the dynamic IP assign range. High IP address is the end of the dynamic IP assigns range. For example: dynamic IP assign range is from 192.168.1.100 ~ 192.168.1.200. 192.168.1.200 will be the High IP address.
- **Subnet Mask:** the dynamic IP assign range subnet mask.
- **Gateway:** the gateway in your network.
- **DNS:** Domain Name Server IP Address in your network.
- Lease Time (sec): It is the time period that system will reset the dynamic IP assignment to ensure the dynamic IP will not been occupied for a long time or the server doesn't know that the dynamic IP is idle.
- And then, click Apply

# **DHCP Server - System Configuration**

**DHCP Server Configuration interface** 

#### **DHCP Client - System Configuration**

When the DHCP server function is active, the system will collect the DHCP client information and displays it here.

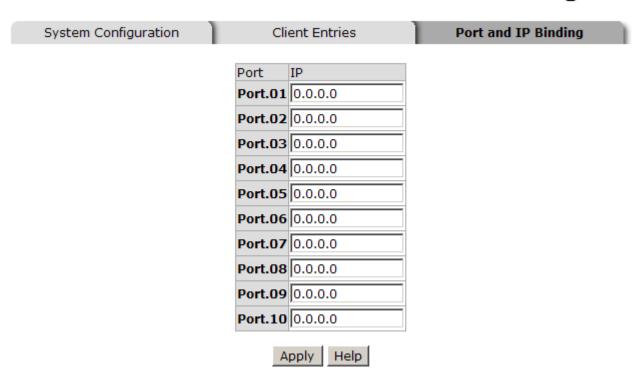

## **DHCP Server - Client Entries**

#### **DHCP Server - Port and IP Bindings**

You can assign the specific IP address that is the IP in dynamic IP assign range to the specific port. When the device is connecting to the port and asks for dynamic IP assigning, the system will assign the IP address that has been assigned before to the connected device.

# **DHCP Server - Port and IP Binding**

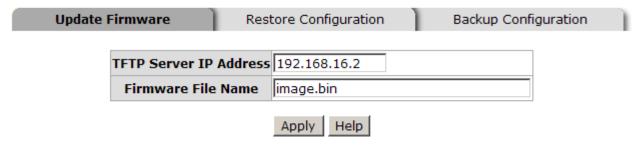

Port and IP Bindings interface

## **TFTP - Update Firmware**

It provides the functions to allow a user to update the switch firmware. Before updating, make sure you have your TFTP server ready and the firmware image is on the TFTP server.

- 1. **TFTP Server IP Address:** fill in your TFTP server IP.
- 2. **Firmware File Name:** the name of firmware image.
- 3. Click Apply .

# TFTP - Update Firmware

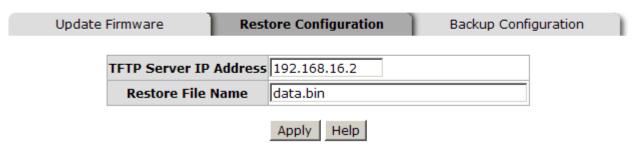

Update Firmware interface

### **TFTP - Restore Configuration**

You can restore EEPROM value from TFTP server, but you must put the image file on TFTP server first, switch will download back flash image.

- 1. **TFTP Server IP Address:** fill in the TFTP server IP.
- 2. **Restore File Name:** fill in the correct restore file name.
- 3. Click Apply .

# **TFTP - Restore Configuration**

Restore Configuration interface

## **TFTP - Backup Configuration**

You can save current EEPROM value from the switch to TFTP server, then go to the TFTP restore configuration page to restore the EEPROM value.

- 1. TFTP Server IP Address: fill in the TFTP server IP
- 2. Backup File Name: fill the file name

3. Click Apply

# **TFTP - Backup Configuration**

## **System Event Log – Syslog Configuration**

Configuring the system event mode that want to be collected and system log server IP.

- Syslog Client Mode: select the system log mode client only, server only, or both S/C.
- 2. System Log Server IP Address: assigned the system log server IP.
- 3. Click Reload to refresh the events log.
- 4. Click Clear to clear all current events log.
- 5. After configuring, Click Apply

# System Event Log - Syslog Configuration

## **System Event Log - SMTP Configuration**

You can set up the mail server IP, mail account, account password, and forwarded email account for receiving the event alert.

- 1. **Email Alert:** enable or disable the email alert function.
- SMTP Server IP: set up the mail server IP address (when Email Alert enabled, this function will then be available).
- 3. **Sender:** key in a complete email address, e.g. <a href="mailto:switch101@123.com">switch101@123.com</a>, to identify

- where the event log comes from.
- Authentication: mark the check box to enable and configure the email account and password for authentication (when Email Alert enabled, this function will then be available).
- 5. **Mail Account:** set up the email account, e.g. <u>johnadmin</u>, to receive the alert. It must be an existing email account on the mail server, which you had set up in **SMTP Server IP Address** column.
- 6. **Password:** The email account password.
- 7. **Confirm Password:** reconfirm the password.
- 8. **Rcpt e-mail Address 1 ~ 6:** you can assign up to 6 e-mail accounts also to receive the alert.
- 9. Click Apply

**Event Configuration interface** 

- Port event selection: select the per port events and per port SMTP events. It has 3 selections Link UP, Link Down, and Link UP & Link Down. Disable means no event is selected.
  - **Link UP:** the system will issue a log message when port connection is up only.
  - Link Down: the system will issue a log message when port connection is down only.
  - Link UP & Link Down: the system will issue a log message when port connection is up and down.

#### **Fault Relay Alarm**

- Power Failure: Mark the check box to enable the function of lighting up FAULT LED on the panel when power fails.
- Port Link Down/Broken: Mark the check box to enable the function of lighting up FAULT LED on the panel when Ports' states are link down or broken.

# **Fault Relay Alarm**

Fault Relay Alarm interface

## **SNTP Configuration**

You can configure the SNTP (Simple Network Time Protocol) settings. The SNTP allows you to synchronize switch clocks in the Internet.

- 1. **SNTP Client:** enable or disable SNTP function to get the time from the SNTP server.
- 2. **Daylight Saving Time:** enable or disable daylight saving time function. When daylight saving time is enabling, you need to configure the daylight saving time period..
- 3. **UTC Timezone:** set the switch location time zone. The following table lists the different location time zone for your reference.

Local Time Zone	Conversion from UTC	Time at 12:00 UTC
-----------------	---------------------	-------------------

November Time Zone	- 1 hour	11am
Oscar Time Zone	-2 hours	10 am
ADT - Atlantic Daylight	-3 hours	9 am

- 4. **SNTP Sever URL:** set the SNTP server IP address.
- 5. **Daylight Saving Period:** set up the Daylight Saving beginning time and Daylight Saving ending time. Both will be different in every year.
- 6. **Daylight Saving Offset (mins):** set up the offset time.
- 7. **Switch Timer:** Displays the switch current time.
- 8. Click Apply

# **SNTP Configuration**

SNTP Client : Disable 🔻

Daylight Saving Time: Disable

Apply Help

SNTP Configuration interface

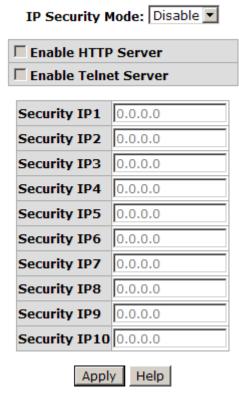

## **IP Security**

IP security function allows user to assign 10 specific IP addresses that have permission to access the switch through the web browser for the securing switch management.

- IP Security Mode: when this option is in Enable mode, the Enable HTTP Server and Enable Telnet Server check boxes will then be available.
- Enable HTTP Server: when this check box is checked, the IP addresses among Security IP1 ~ IP10 will be allowed to access via HTTP service.
- Enable Telnet Server: when checked, the IP addresses among Security IP1 ~ IP10 will be allowed to access via telnet service.
- Security IP 1 ~ 10: Assign up to 10 specific IP address. Only these 10 IP address can access and manage the switch through the Web browser
- And then, click Apply button to apply the configuration

**[NOTE]** Remember to execute the 'Save Configuration' action, otherwise the new configuration will lose when switch power off.

# IP Security

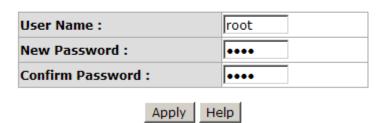

IP Security interface

## **User Authentication**

Change web management login user name and password for the management security issue

- 1. **User name:** Key in the new user name(The default is 'root')
- 2. **Password:** Key in the new password(The default is 'root')
- 3. **Confirm password:** Re-type the new password
- 4. And then, click Apply

# **User Authentication**

User Authentication interface

### **Port Statistics**

The following information provides the current port statistic information.

- **Port:** The port number.
- **Type:** Displays the current speed of connection to the port.
- Link: The status of linking—'Up' or 'Down'.
- **State:** It's set by Port Control. When the state is disabled, the port will not transmit or receive any packet.
- Tx Good Packet: The counts of transmitting good packets via this port.
- Tx Bad Packet: The counts of transmitting bad packets (including undersize [less than 64 octets], oversize, CRC Align errors, fragments and jabbers packets) via this port.
- Rx Good Packet: The counts of receiving good packets via this port.
- Rx Bad Packet: The counts of receiving good packets (including undersize [less than 64 octets], oversize, CRC error, fragments and jabbers) via this port.
- Tx Abort Packet: The aborted packet while transmitting.
- Packet Collision: The counts of collision packet.
- Packet Dropped: The counts of dropped packet.
- Rx Bcast Packet: The counts of broadcast packet.
- Rx Mcast Packet: The counts of multicast packet.
- Click Clear button to clean all counts.

## **Port Statistics**

Port	Туре	Link						Tx Abort Packet		Packet Dropped		RX Mcast Packet
Port.01	100TX	Down	Enable	0	0	0	0	0	0	0	0	0

Port Statistics interface

### **Port Control**

In Port control, you can view every port status that depended on user setting and the negotiation result.

- 1. **Port:** select the port that you want to configure.
- 2. **State:** Current port status. The port can be set to disable or enable mode. If the port setting is disable then will not receive or transmit any packet.
- 3. **Negotiation:** set auto negotiation status of port.
- 4. **Speed:** set the port link speed.
- 5. **Duplex:** set full-duplex or half-duplex mode of the port.
- 6. **Flow Control:** set flow control function is **Symmetric** or **Asymmetric** in Full Duplex mode. The default value is **Symmetric**.
- 7. **Security:** When its state is 'On', means this port accepts only one MAC address.
- 8. Click Apply .

Port Control interface

## **Port Trunk**

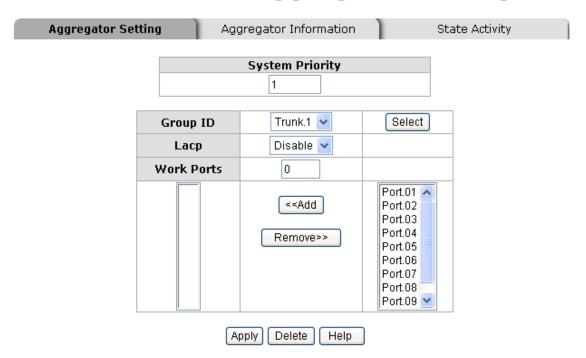

The Link Aggregation Control Protocol (LACP) provides a standardized means for exchanging information between Partner Systems on a link to allow their Link Aggregation Control instances to reach agreement on the identity of the Link Aggregation Group to which the link belongs, move the link to that Link Aggregation Group, and enable its transmission and reception functions in an orderly manner. Link aggregation lets you group up to 4 consecutive ports into two dedicated connections. This feature can expand bandwidth to a device on the network. **LACP operation requires full-duplex mode**, more detail information refers to IEEE 802.3ad.

## **Aggregator setting**

- 1. **System Priority:** a value used to identify the active LACP. The switch with the lowest value has the highest priority and is selected as the active LACP.
- 2. **Group ID:** There are three trunk groups to provide configure. Choose the '**Group ID**' and click Select .
- LACP: If enable, the group is LACP static trunk group. If disable, the group is local static trunk group. All ports support LACP dynamic trunk group. If connecting to the device that also supports LACP, the LACP dynamic trunk group will be created automatically.
- 4. Work ports: allow max four ports can be aggregated at the same time. With LACP static trunk group, the exceed ports are standby and can be aggregated if work ports fail. If it is local static trunk group, the number of ports must be the same as the group member ports.
- 5. Select the ports to join the trunk group. Allow max four ports can be aggregated at the same time. Click Add button to add the port. To remove unwanted ports, select the port and click Remove button.
- 6. If LACP enable, you can configure LACP Active/Passive status in each ports on State Activity page.
- 7. Click Apply

8. Use Delete button to delete Trunk Group. Select the Group ID and click Delete button.

# Port Trunk - Aggregator Setting

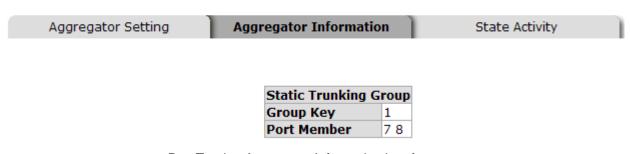

Port Trunk—Aggregator Setting interface

## **Aggregator Information**

When you have setup the aggregator setting with LACP disabled, you will see the local static trunk group information here.

# Port Trunk - Aggregator Information

Port Trunk - Aggregator Information interface

### **State Activity**

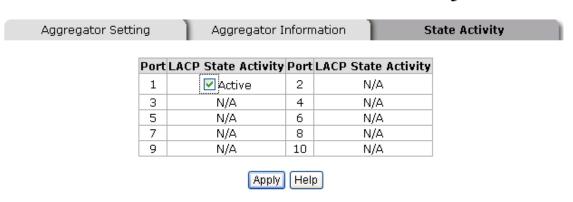

When you had setup the LACP aggregator, you can configure port state activity. You can mark or un-mark the port. When you mark the port and click Apply button the port state activity will change to **Active**. Opposite is **Passive**.

- Active: The port automatically sends LACP protocol packets.
- Passive: The port does not automatically send LACP protocol packets, and responds only if it receives LACP protocol packets from the opposite device.

### [NOTE]

- A link having either two active LACP ports or one active port can perform dynamic LACP trunk.
- 2. A link has two passive LACP ports will not perform dynamic LACP trunk because both ports are waiting for an LACP protocol packet from the opposite device.
- 3. If you are active LACP's actor, after you have selected trunk port, the active status will be created automatically.

# Port Trunk - State Activity

Port Trunk - State Activity interface

## **Port Mirroring**

The Port mirroring is a method for monitor traffic in switched networks. Traffic through

ports can be monitored by one specific port. That means traffic goes in or out monitored (source) ports will be duplicated into mirror (destination) port.

- **Destination Port:** There is only one port can be selected to be destination (mirror) port for monitoring both RX and TX traffic which come from source port. Or, use one of two ports for monitoring RX traffic only and the other one for TX traffic only. User can connect mirror port to LAN analyzer or Netxray
- Source Port: The ports that user wants to monitor. All monitored port traffic will be copied to mirror (destination) port. User can select multiple source ports by checking the RX or TX check boxes to be monitored.
- And then, click Apply button.

# **Port Mirroring**

	Destina	ntion Port	Sourc	e Port
	RX	TX	RX	TX
Port.01	•	•		
Port.02	0	0		
Port.03	0	0		
Port.04	0	0		
Port.05	0	0		
Port.06	0	0		
Port.07	0	0		
Port.08	0	0		
Port.09	0	0		
Port.10	0	0		

Port Trunk - Port Mirroring interface

Help

Apply

## **Rate Limiting**

You can set up every port's bandwidth rate and frame limitation type.

■ Ingress Limit Frame type: select the frame type that wants to filter. The frame types have 4 options for selecting: All, Broadcast/Multicast/Flooded Unicast, Broadcast/Multicast and Broadcast only.

**Broadcast/Multicast/Flooded Unicast, Broadcast/Multicast** and **Bbroadcast only** types are only for ingress frames. The egress rate only supports **All** type.

# Rate Limiting

	Ingress Limit Frame Type	Ingress	Egress
Port.01	All	0 kbps	0 kbps
Port.02	All	0 kbps	0 kbps
Port.03	All	0 kbps	0 kbps
Port.04	All	0 kbps	0 kbps
Port.05	All	0 kbps	0 kbps
Port.06	All	0 kbps	0 kbps
Port.07	All	0 kbps	0 kbps
Port.08	All	0 kbps	0 kbps
Port.09	All	0 kbps	0 kbps
Port.10	All	0 kbps	0 kbps

Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.

Rate Limiting interface

- All the ports support port ingress and egress rate control. For example, assume port 1 is 10Mbps, users can set it's effective egress rate is 1Mbps, ingress rate is 500Kbps. The switch performs the ingress rate by packet counter to meet the specified rate
  - > Ingress: Enter the port effective ingress rate(The default value is '0')
  - **Egress:** Enter the port effective egress rate(The default value is '0')
  - And then, click Apply to apply the settings

## **VLAN** configuration

A Virtual LAN (VLAN) is a logical network grouping that limits the broadcast domain, which would allow you to isolate network traffic, so only the members of the VLAN will receive traffic from the same members of VLAN. Basically, creating a VLAN from a switch is logically equivalent of reconnecting a group of network devices to another Layer 2 switch. However, all the network devices are still plugged into the same switch physically.

The industrial switch supports port-based and 802.1Q (tagged-based) VLAN. The default configuration of VLAN operation mode is **Disable**.

# VLAN Configuration

VLAN Operation Mode : Disable
☐ Enable GVRP Protocol
Management Vlan ID : 0
Apply

### **VLAN NOT ENABLE**

VLAN Configuration interface

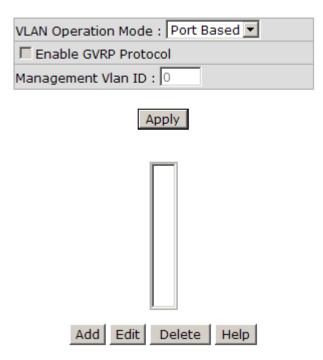

## VLAN configuration - Port-based VLAN

Packets can go among only members of the same VLAN group. Note all unselected ports are treated as belonging to another single VLAN. If the port-based VLAN enabled, the VLAN-tagging is ignored.

In order for an end station to send packets to different VLAN groups, it itself has to be either capable of tagging packets it sends with VLAN tags or attached to a VLAN-aware bridge that is capable of classifying and tagging the packet with different VLAN ID based

on not only default PVID but also other information about the packet, such as the protocol.

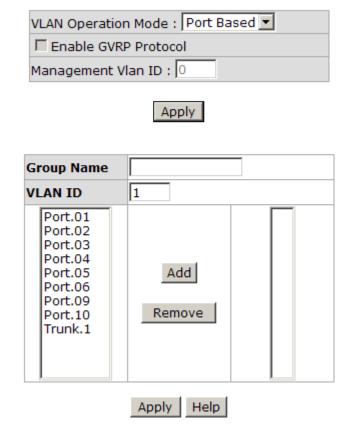

# VLAN Configuration

VLAN - Port Based interface

- Click Add to add a new VLAN group (The maximum VLAN group is up to 64 VLAN groups)
- Entering the VLAN name, group ID and grouping the members of VLAN group
- And then, click Apply

# **VLAN Configuration**

VLAN—Port Based Add interface

- You will see the VLAN displays.
- Use Delete button to delete unwanted VLAN.
- Use Edit button to modify existing VLAN group.

**[NOTE]** Remember to execute the 'Save Configuration' action, otherwise the new configuration will lose when switch power off.

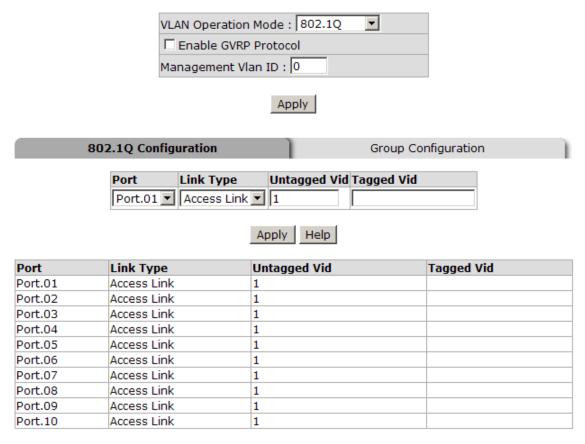

### **802.1Q VLAN**

Tagged-based VLAN is an IEEE 802.1Q specification standard. Therefore, it is possible to create a VLAN across devices from different switch venders. IEEE 802.1Q VLAN uses a technique to insert a 'tag' into the Ethernet frames. Tag contains a VLAN Identifier (VID) that indicates the VLAN numbers.

You can create Tag-based VLAN, and enable or disable GVRP protocol. There are 256 VLAN groups to provide configure. Enable 802.1Q VLAN, the all ports on the switch belong to default VLAN, VID is 1. The default VLAN can't be deleting.

GVRP allows automatic VLAN configuration between the switch and nodes. If the switch is connected to a device with GVRP enabled, you can send a GVRP request using the VID of a VLAN defined on the switch; the switch will automatically add that device to the existing VLAN.

# VLAN Configuration

802.1q VLAN interface

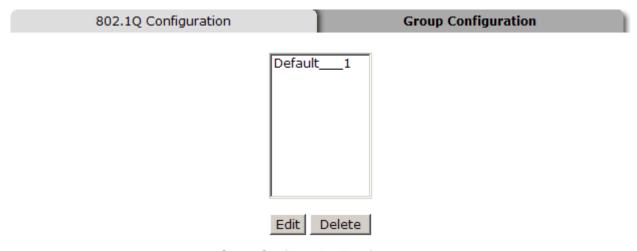

### **802.1Q Configuration**

- 1. **Enable GVRP Protocol:** check the check box to enable GVRP protocol.
- 2. Select the port that wants to configure.
- 3. **Link Type**: there are 3 types of link type.
  - Access Link: single switch only, allow user to group ports by setting the same VID.
  - Trunk Link: extended application of Access Link, allow user to group ports by setting the same VID with 2 or more switches.
  - **Hybrid Link:** Both **Access Link** and **Trunk Link** are available.
- 4. **Untagged VID:** assign the untagged frame VID.
- 5. **Tagged VID:** assign the tagged frame VID.
- 6. Click Apply
- 7. You can see each port setting in the below table on the screen.

### **Group Configuration**

Edit the existing VLAN Group.

- Select the VLAN group in the table list.
- 2. Click Apply

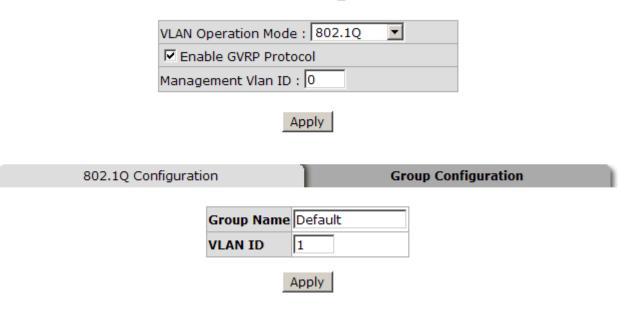

Group Configuration interface

3. You can Change the VLAN group name and VLAN ID.

4. Click Apply .

## **Rapid Spanning Tree**

The Rapid Spanning Tree Protocol (RSTP) is an evolution of the Spanning Tree Protocol and provides for faster spanning tree convergence after a topology change. The system also supports STP and the system will auto detect the connected device that is running STP or RSTP protocol.

## **RSTP - System Configuration**

- User can view spanning tree information about the Root Bridge
- User can modify RSTP state. After modification, click Apply button
  - RSTP mode: user must enable or disable RSTP function before configure the related parameters
  - Priority (0-61440): a value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, user must reboot the switch. The value must be multiple of 4096 according to the protocol standard rule

- ➤ Max Age (6-40): the number of seconds a bridge waits without receiving Spanning-tree Protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40
- ➤ Hello Time (1-10): the time that controls switch sends out the BPDU packet to check RSTP current status. Enter a value between 1 through 10
- Forward Delay Time (4-30): the number of seconds a port waits before changing from its Rapid Spanning-Tree Protocol learning and listening states to the forwarding state. Enter a value between 4 through 30

**[NOTE]** Follow the rule to configure the MAX Age, Hello Time, and Forward Delay Time.

2 x (Forward Delay Time value -1) > = Max Age value >= 2 x (Hello Time value +1)

# RSTP - System Configuration

S	ystem Configuration Po	ort Configuration
	RSTP Mode	Disable 💌
	Priority (0-61440)	32768
	Max Age (6-40)	20
	Hello Time (1-10)	2
	Forward Delay Time (4-30)	15

Priority must be a multiple of 4096
2\*(Forward Delay Time-1) should be greater than or equal to the Max Age.
The Max Age should be greater than or equal to 2\*(Hello Time + 1).

Apply

RSTP System Configuration interface

## **RSTP - Port Configuration**

You can configure path cost and priority of every port.

- 1. Select the port in Port column.
- 1. **Path Cost:** The cost of the path to the other bridge from this transmitting bridge at the specified port. Enter a number 1 through 200000000.
- 2. **Priority:** Decide which port should be blocked by priority in LAN. Enter a number 0 through 240. The value of priority must be the multiple of 16.
- 3. **P2P:** Some of the rapid state transactions that are possible within RSTP are dependent upon whether the port concerned can only be connected to exactly one other bridge (i.e. it is served by a point-to-point LAN segment), or can be connected to two or more bridges (i.e. it is served by a shared medium LAN segment). This function allows the P2P status of the link to be manipulated administratively. True is P2P enabling. False is P2P disabling.
- 4. **Edge:** The port directly connected to end stations cannot create bridging loop in the network. To configure the port as an edge port, set the port to '**True**' status.
- 5. **Non Stp:** The port includes the STP mathematic calculation. **True** is not including STP mathematic calculation. **False** is including the STP mathematic calculation.
- 6. Click Apply .

# **RSTP - Port Configuration**

## **SNMP Configuration**

Simple Network Management Protocol (SNMP) is the protocol developed to manage nodes (servers, workstations, routers, switches and hubs etc.) on an IP network. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth. Network management systems learn of problems by receiving traps or change notices from network devices implementing SNMP.

### **System Configuration**

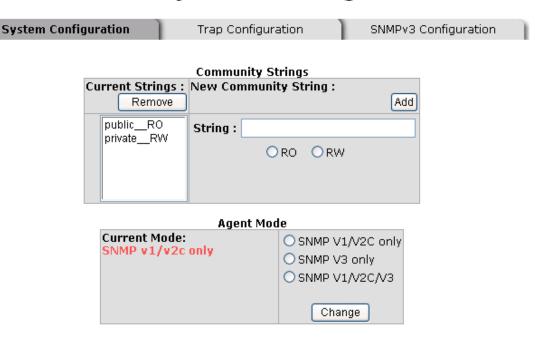

### **■** Community Strings

You can define new community string set and remove unwanted community string.

- 1. **String:** fill the name of string.
- 2. **RO:** Read only. Enables requests accompanied by this string to display MIB-object information.
- 3. **RW:** Read write. Enables requests accompanied by this string to display MIB-object information and to set MIB objects.
- 1. Click Add .
- 2. To remove the community string, select the community string that you have defined and click Remove. You cannot edit the name of the default community string set.
- Agent Mode: Select the SNMP version that you want to use it. And then click

  Change to switch to the selected SNMP version mode.

# **SNMP - System Configuration**

SNMP System Configuration interface

## **Trap Configuration**

A trap manager is a management station that receives traps, the system alerts generated by the switch. If no trap manager is defined, no traps will issue. Create a trap manager by entering the IP address of the station and a community string. To define management stations as trap manager and enter SNMP community strings and selects the SNMP version.

- 1. **IP Address:** Enter the IP address of trap manager.
- 2. **Community:** Enter the community string.
- 3. **Trap Version:** Select the SNMP trap version type v1 or v2c.
- 4. Click Add .
- 5. To remove the community string, select the community string that you have defined and click Remove. You cannot edit the name of the default community string set.

# **SNMP - Trap Configuration**

Trap Managers interface

## **SNMPV3** Configuration

Configure the SNMP V3 function.

### **Context Table**

Configure SNMP v3 context table. Assign the context name of context table. Click Add to add context name. Click Remove to remove unwanted context name.

### **User Profile**

Configure SNMP v3 user table..

- User ID: set up the user name.
- **Authentication Password:** set up the authentication password.
- Privacy Password: set up the private password.
- Click Add to add context name.
- Click Remove to remove unwanted context name.

Note:
Any modification of SNMPv3 tables might cause MIB accessing rejection. Please take notice of the causality between the tables before you modify these tables.

SNMP V3 configuration interface

## **Group Table**

Configure SNMP v3 group table.

- Security Name (User ID): Assign the user name that you have set up in user table.
- **Group Name:** Set up the group name.
- Click Add to add context name.
- Click Remove to remove unwanted context name.

### **Access Table**

Configure SNMP v3 access table.

- Context Prefix: Set up the context name.
- Group Name: Set up the group.
- Security Level: Set up the access level.
- Context Match Rule: Select the context match rule.
- Read View Name: Set up the read view.
- Write View Name: Set up the write view.
- Notify View Name: Set up the notify view.
- Click Add to add context name.
- Click Remove to remove unwanted context name.

### **MIBview Table**

Configure MIB view table.

- ViewName: Set up the name.
- Sub-Oid Tree: Fill the Sub OID.
- **Type:** Select the type exclude or included.
- Click Add to add context name.
- Click Remove to remove unwanted context name.

## **QoS Configuration**

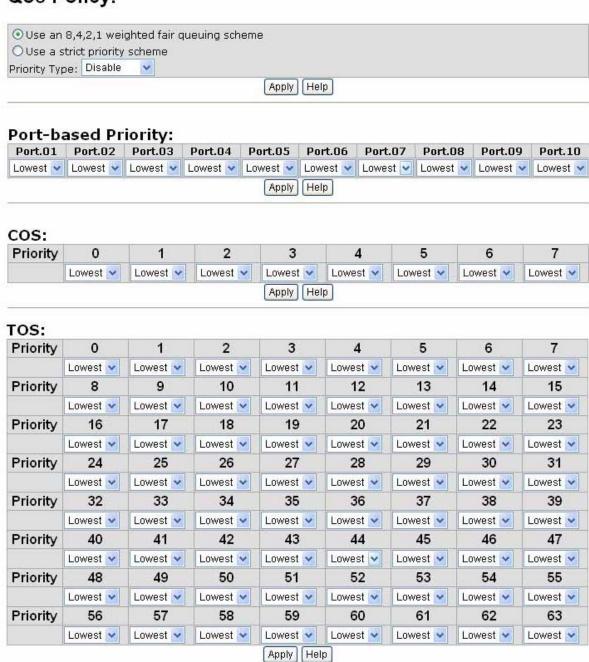

You can configure Qos policy and priority setting, per port priority setting, COS and TOS setting.

### **QoS Policy and Priority Type**

- Qos Policy: select the Qos policy rule.
  - ➤ Using the 8,4,2,1 weight fair queue scheme: The switch will follow 8:4:2:1 rate to process priority queue from High to lowest queue. For example, when the system processes, 1 frame of the lowest queue, 2 frames of the low queue, 4 frames of the middle queue, and 8 frames of the high queue will be processed at the same time in accordance with the 8,4,2,1 policy rule.
  - ➤ Use the strict priority scheme: Always higher queue will be process first, except higher queue is empty.
- **Priority Type:** there are 5 priority type selections available. Disable means no priority type is selected.
- **Port-base:** the port priority will follow the **Port-base** that you have assigned High, middle, low, or lowest.
  - COS only: the port priority will only follow the COS priority that you have assigned.
  - TOS only: the port priority will only follow the TOS priority that you have assigned.
  - COS first: the port priority will follow the COS priority first, and then other priority rule.
  - TOS first: the port priority will follow the TOS priority first, and the other priority rule.
- Click Apply

# **QoS Configuration**

## Qos Policy:

QoS Configuration interface

## **Port Base Priority**

Configure per port priority level.

■ Port: each port has 4 priority levels – High, Middle, Low, and Lowest.

■ Click Apply

## **COS Configuration**

Set up the COS priority level.

- COS priority: Set up the COS priority level 0~7 —High, Middle, Low, Lowest.
- Click Apply

## **TOS Configuration**

Set up the TOS priority.

- TOS priority: the system provides 0~63 TOS priority level. Each level has 4 types of priority high, middle, low, and lowest. The default value is 'Lowest' priority for each level. When the IP packet is received, the system will check the TOS level value in the IP packet that has received. For example, user set the TOS level 25 is high. The port 1 is following the TOS priority policy only. When the port 1 packet received, the system will check the TOS value of the received IP packet. If the TOS value of received IP packet is 25(priority = high), and then the packet priority will have highest priority.
- Click Apply .

## **IGMP** Configuration

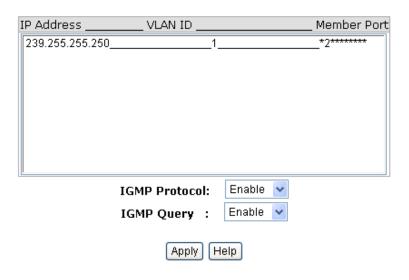

The Internet Group Management Protocol (IGMP) is an internal protocol of the Internet Protocol (IP) suite. IP manages multicast traffic by using switches, routers, and hosts that support IGMP. Enabling IGMP allows the ports to detect IGMP queries and report packets and manage IP multicast traffic through the switch. IGMP have three fundamental types of message as follows:

Message	Description
Query	A message sent from the querier (IGMP router or switch) asking for a response from each host belonging to the multicast group.
Report	A message sent by a host to the querier to indicate that the host wants to be or is a member of a given group indicated in the report message.
Leave Group	A message sent by a host to the querier to indicate that the host has quit being a member of a specific multicast group.

The switch support IP multicast, you can enable IGMP protocol on web management's switch setting advanced page, then displays the IGMP snooping information. IP multicast addresses range are from 224.0.0.0 through 239.255.255.255.

- **IGMP Protocol:** Enable or disable the IGMP protocol.
- **IGMP Query:** Select the IGMP query function as Enable or Auto to set the switch as a querier for IGMP version 2 multicast network.
- Click Apply .

# **IGMP** Configuration

IGMP Configuration interface

## X-Ring

X-Ring provides a faster redundant recovery than Spanning Tree topology. The action is similar to STP or RSTP, but the algorithms not the same.

In the X-Ring topology, every switch should enable X-Ring function and assign two member ports in the ring. Only one switch in the X-Ring group would be set as a master switch that would be blocked, called backup port, and another port is called working port. Other switches in the X-Ring group are called working switches and their two member ports are called working ports. When the failure of network connection occurs, the backup port will automatically become a working port to recovery the failure.

The switch supports the function and interface for setting the switch as the ring master or slave mode. The ring master can negotiate and place command to other switches in the X-Ring group. If there are 2 or more switches in master mode, then software will select the switch with lowest MAC address number as the ring master. The X-Ring master ring mode will be enabled by the X-Ring configuration interface. Also, user can identify the switch as the ring master from the R.M. LED panel of the LED panel on the switch.

The system also supports the coupling ring that can connect 2 or more X-Ring group for the redundant backup function and dual homing function that prevent connection lose between X-Ring group and upper level/core switch.

- **Enable X-Ring:** To enable the X-Ring function. Marking the check box to enable the X-Ring function.
- Enable Ring Master: Mark the check box for enabling this machine to be a ring master.
- 1<sup>st</sup> & 2<sup>nd</sup> Ring Ports: Pull down the selection menu to assign two ports as the member ports. 1<sup>st</sup> Ring Port is the working port and 2<sup>nd</sup> Ring Port is the backup port. When 1<sup>st</sup> Ring Port fails, the system will automatically upgrade the 2<sup>nd</sup> Ring Port to be the working port.
- **Enable Coupling Ring:** To enable the coupling ring function. Marking the check box to enable the coupling ring function.

- Coupling port: Assign the member port.
- Control port: Set the switch as the master switch in the coupling ring.
- Enable Dual Homing: Set up one of port on the switch to be the Dual Homing port. In an X-Ring group, maximum Dual Homing port is one. Dual Homing only work when the X-Ring function enable.
- And then, click | Apply | to apply the configuration.

# X-Ring Configuration

1st Ring Port | 2nd Ring Port | Coupling Port | Control Port | Homing Port | FORWARDING FORWARDING FORWARDING FORWARDING | FORWARDING |

X-ring Interface

### [NOTE]

- 1. When the X-Ring function enable, user must disable the RSTP. The X-Ring function and RSTP function cannot exist at the same time.
- 2. Remember to execute the 'Save Configuration' action, otherwise the new configuration will lose when switch power off.

## Security

In this section, you can configure 802.1x and MAC address table.

## 802.1X/Radius Configuration

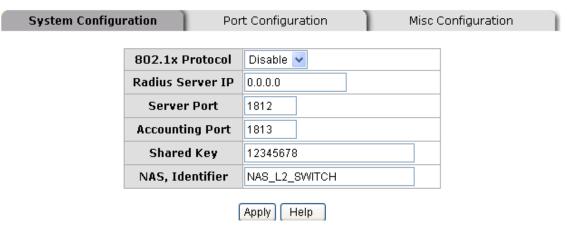

802.1x is an IEEE authentication specification that allows a client to connect to a wireless access point or wired switch but prevents the client from gaining access to the Internet until it provides authority, like a user name and password that are verified by a separate server.

### **System Configuration**

After enabling the IEEE 802.1X function, you can configure the parameters of this function.

- 1. **IEEE 802.1x Protocol:** .enable or disable 802.1x protocol.
- 2. Radius Server IP: set the Radius Server IP address.
- Server Port: set the UDP destination port for authentication requests to the specified Radius Server.
- 4. **Accounting Port:** set the UDP destination port for accounting requests to the specified Radius Server.
- 5. **Shared Key:** set an encryption key for using during authentication sessions with the specified radius server. This key must match the encryption key used on the Radius Server.
- 6. **NAS**, **Identifier:** set the identifier for the radius client.
- 7. Click Apply

# 802.1x/Radius - System Configuration

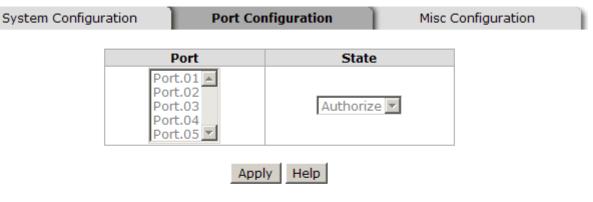

802.1x System Configuration interface

## **802.1x Per Port Configuration**

You can configure 802.1x authentication state for each port. The State provides Disable, Accept, Reject and Authorize. Use '**Space**' key change the state value.

- **Reject:** the specified port is required to be held in the unauthorized state.
- **Accept:** the specified port is required to be held in the Authorized state.
- Authorized: the specified port is set to the Authorized or Unauthorized state in accordance with the outcome of an authentication exchange between the Supplicant and the authentication server.
- **Disable:** The specified port is required to be held in the Authorized state
- Click Apply

# 802.1x/Radius - Port Configuration

Port Authorization

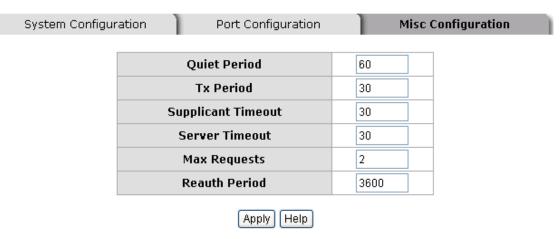

State
Disable

802.1x Per Port Setting interface

### **Misc Configuration**

- Quiet Period: set the period during which the port doesn't try to acquire a supplicant.
- 2. **TX Period:** set the period the port wait for retransmit next EAPOL PDU during an authentication session.
- 3. **Supplicant Timeout:** set the period of time the switch waits for a supplicant response to an EAP request.
- 4. **Server Timeout:** set the period of time the switch waits for a server response to an authentication request.
- 5. **Max Requests:** set the number of authentication that must time-out before authentication fails and the authentication session ends.
- Reauth period: set the period of time after which clients connected must be reauthenticated.
- 7. Click Apply

# 802.1x/Radius - Misc Configuration

802.1x Misc Configuration interface

### **MAC Address Table**

Use the MAC address table to ensure the port security.

### Static MAC Address

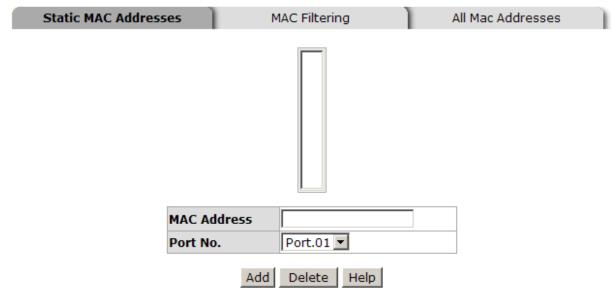

You can add a static MAC address; it remains in the switch's address table, regardless of whether the device is physically connected to the switch. This saves the switch from having to re-learn a device's MAC address when the disconnected or powered-off device is active on the network again. You can add / modify / delete a static MAC address.

### Add the Static MAC Address

You can add static MAC address in switch MAC table.

- MAC Address: Enter the MAC address of the port that should permanently forward traffic, regardless of the device network activity.
- 2. **Port No.:** pull down the selection menu to select the port number.
- 3. Click Add .
- 4. If you want to delete the MAC address from filtering table, select the MAC address and click Delete .

## MAC Address Table - Static MAC Addresses

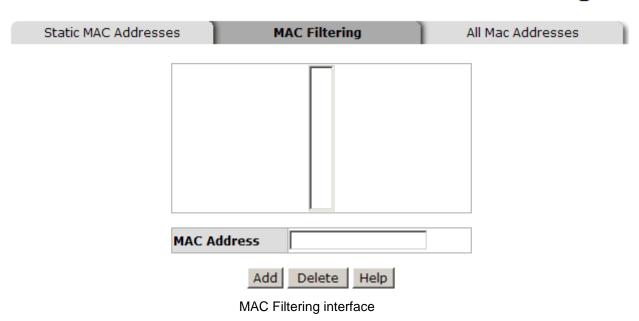

Static MAC Addresses interface

### **MAC Filtering**

By filtering MAC address, the switch can easily filter pre-configure MAC address and reduce the un-safety. You can add and delete filtering MAC address.

# MAC Address Table - MAC Filtering

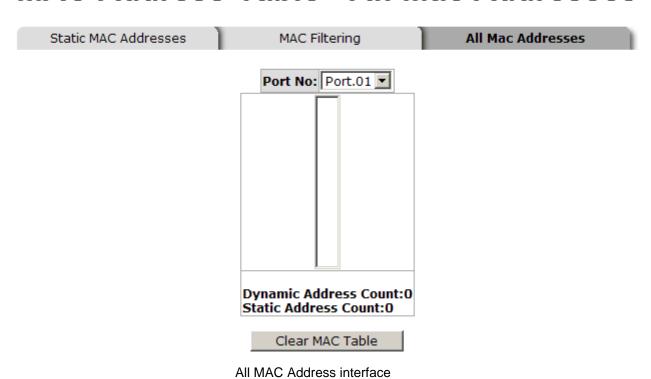

- 1. **MAC Address:** Enter the MAC address that you want to filter.
- 2. Click Add
- 3. If you want to delete the MAC address from filtering table, select the MAC address and click Delete .

### **All MAC Addresses**

You can view the port that connected device's MAC address and related devices' MAC address.

- 1. Select the port.
- 2. The selected port of static MAC address information will be displayed here.
- 3. Click Clear MAC Table to clear the current port static MAC address information on screen.

## MAC Address Table - All Mac Addresses

## **Factory Default**

Reset switch to default configuration. Click Reset to reset all configurations to the

default value.

## **System Reboot**

Reboot the switch in software reset. Click Reboot to reboot the system.

# **System Reboot**

Please click [Reboot] button to restart switch device.

Reboot

System Reboot interface

# **Troubles shooting**

- Verify that is using the right power cord/adapter (DC 12-48V), please don't use the power adapter with DC output higher than 48V, or it will burn this converter down.
- Select the proper UTP cable to construct user network. Please check that is using the right cable. Use unshielded twisted-pair (UTP) or shield twisted-pair (STP) cable for RJ-45 connections. 100Ω Category 5e or above cable for 100/1000Mbps connections. Also be sure that the length of any twisted-pair connection does not exceed 100 meters (328 feet).
- **Diagnosing LED Indicators:** the Switch can be easily monitored through panel indicators, which describes common problems user may encounter and where user can find possible solutions, to assist in identifying problems.
- If the power indicator does not light on when the power cord is plugged in, you may have a problem with power cord. Then check for loose power connections, power losses or surges at power outlet. If you still cannot resolve the problem, contact your local dealer for assistance.
- If the Industrial switch LED indicators are normal and the connected cables are correct but the packets still cannot transmit. Please check your system's Ethernet devices' configuration or status.

# **Technical Specification**

The 8 10/100TX + 2 10/100/1000T/Mini-GBIC Combo with X-Ring L2 Managed Industrial Switch technical specification is following.

	IEEE 802.3 10Base-T Ethernet
	IEEE 802.3u 100Base-TX Ethernet
	IEEE 802.3ab 1000Base-T
	IEEE 802.3z Gigabit fiber
	IEEE 802.3x Flow Control and Back-pressure
Ctandard	IEEE 802.3ad Port trunk with LACP

	(Green), Fault (Red), Master (Green)
	10Base-T: 2-pair UTP/STP Cat. 3, 4, 5 cable
Network Cable	EIA/TIA-568 100-ohm (100m)
	100Base-TX: 2-pair UTP/STP Cat. 5/5e cable
	EIA/TIA-568 100-ohm (100m)
	1000Base-T: 2-pair UTP/STP Cat. 5e or above cable
	EIA/TIA-568 100-ohm (100m)

Optical cable	<ul> <li>LC (Multi-mode): 50/125 or 62.5/125µ m</li> <li>LC (Single mode): 9/125µ m</li> <li>Available distance: 2km (Multi-mode)/30km (single-mode)</li> <li>Wavelength: 1310nm (multi-mode/single mode)</li> </ul>
Back-plane	5.6Gbps
Packet throughput ability	8.3Mpps at 64bytes
Power Supply	12 ~48 VDC Redundant power with polarity reverse protection and removable terminal block.
Power consumption	9.5 Watts
X-Ring/X-Ring plus	Support X-Ring, Dual Homing, and Couple Ring Provides redundant backup feature and the recovery time below 300ms  **X-Ring plus can be below 1 ms
VLAN	Port based VLAN IEEE802.1Q Tag VLAN (256 entries)/VLAN ID (up to 4k in number which can be assigned from 1 to 4096) GVRP (256 groups) Double Tag VLAN (Q in Q)* Private VLAN**
Port Trunk with LACP	LACP Port Trunk: 4 Trunk groups/Maximum 4 trunk members
LLDP**	Supports LLDP that allows the switch to advertise its identity and capabilities

Quality of service	The quality of service determined by port, Tag and IPv4 Type of Service, IPv4/IPv6 Different Service
Class of service	Supports IEEE 802.1p class of service, per port provides 4 priority queues
Spanning tree	IEEE802.1d spanning tree IEEE802.1w rapid spanning tree.
IGMP	Supports IGMP snooping v1, v2 and v3 Up to 256 multicast groups and IGMP query
SMTP	Supports SMTP Server and 6 e-mail accounts for receiving event alert
SNTP	Supports SNTP to synchronize system clock in Internet
IP Security	Supports 10 IP addresses of permission to access the switch management and to prevent unauthorized intruder
Login Security	Supports IEEE-802.1X Authentication/RADIUS
Port Security	Supports 100 entries of MAC address for static MAC and another 100 for MAC filter
Port mirror	TX packet only RX packet only, Both of TX and RX packet
Firmware update	TFTP firmware update TFTP backup and restore
Relay Alarm	Provides one relay output for port breakdown, power fail Alarm Relay current carry ability: 1A @ DC24V

Bandwidth control	Supports ingress packet filter and egress packet limit The egress rate control supports all of packet type and the limit rates are 100K ~ 250Mbps Ingress filter packet type combination rules are Broadcast/Multicast/Unknown Unicast packet, Broadcast/Multicast, Broadcast packet only and all of packets The packet filter rate can be set from 100k to 250Mbps
Flow Control	Supports Flow Control for Full-duplex and Back Pressure for Half-duplex
System Log	Supports System log record and remote system log server
DHCP	Provides DHCP Client/DHCP Server function
DNS	Provides DNS client feature Supports Primary and Secondary DNS Server
Install	DIN rail kit and wall mount ear
Operation Temp.	-20°ℂ to 60°ℂ
Operation Humidity	5% to 95% (Non-condensing)
Storage Temperature	-40°ℂ to 85°ℂ
